CAREER OBJECTIVE

Aspiring AI Engineer with a strong foundation in software testing and problem-solving. Built programming experience in Java and C during academics, and currently working with Python to align with my long-term goal of becoming an AI Engineer. Eager to apply analytical thinking and continuous learning to build intelligent, real-world solutions.

EDUCATION

Master of Computer Applications (MCA) — Pursuing

Rajkiyakrit B S S (+2) Inter School, Harpur, Begusarai, Bihar Board • 2021

High School (10th) — 71.4%

S.P.S. High School, Binodpur, Begusarai, Bihar Board • 2019

PROJECTS

Personal Portfolio Website

Designed and developed a personal portfolio website to showcase skills, projects, and resume in an interactive, easy-to-navigate format. Built using HTML, CSS, and JavaScript, with a clean and responsive layout. The portfolio is a continuously evolving project, regularly updated with new work and improvements.

Hotel Management System

A desktop-based Hotel Management System developed using Java (Swing for GUI) with MySQL as the backend database. The application supports separate Admin and Reception modules — Admin can add employees, rooms, and drivers, while Reception handles guest check-in/check-out, customer information, room search, manager details, and pickup services. Implemented secure login/signup with password recovery, dynamic room availability tracking, customer and manager data management, and database-driven CRUD operations using JDBC (PreparedStatement) for safe SQL queries. The system was tested across login, admin, and reception workflows to ensure reliable functionality.
